

**IN THE SPECIFICATION:**

*Please amend the paragraph at page 19, line 19, as follows:*

Particularly in the case of a low viscosity ink (about 10 mPa·s), a content of these lubricants is preferably 0.01 to 2.0 %, more preferably 0.05 to 1.5 % and particularly preferably 0.1 to 1.2 % based on the total amount of the ink composition from the viewpoint of the non-feathering property. When the viscosity is 100 to ~~[[400]]~~ 4000 mPa·s (at a shear speed of  $3.84 \text{ s}^{-1}$ ) in an ink having non-Newtonian viscosity, the content may not be restricted because of the viscosity effect thereof.
